

Directions for Use

CAUTION:

Surgical airway training, kit familiarization, and the adherence to established protocol are required for use of this product.

STEPS:

1. **Prepare** equipment (test distal cuff, follow established protocol).
2. **Stabilize** thyroid cartilage and **Locate** cricothyroid membrane.
3. **Cleanse** site.
4. **Vertically incise soft tissue** over cricothyroid membrane (approximately 3-4 cm incision).
5. Confirm anatomy, and **horizontally incise cricothyroid membrane.**

Maintain cricothyroid **opening:**

Option 5a: **Insert tracheal hook** into cricothyroid opening and suspend thyroid cartilage.

Option 5b: **Insert finger** into cricothyroid opening.

6. **Insert Bougie** through cricothyroid opening, and **confirm tactile feedback** from tracheal rings.
7. **Advance Bougie-Tube assembly**, and **inflate cuff** (appropriate volume between 5-10 cc of air).
8. **Remove Bougie Assembly.**
9. **Ventilate patient, reconfirm tracheal placement** and **secure** tube.

Confirmation, and reconfirmation of correct tube placement may include, but is not limited to:

Tracheal ring "clicking" or "tactile feedback" from inserted Bougie; chest rise and fall during ventilation; presence of bilateral breath sounds with auscultation; absence of epigastric sounds with auscultation; evidence of sustained ETCO₂ with ventilation; negative finding of esophageal detection device.
